

New Safetylink Temporary Anchor

SafetyLink will be launching a new ground breaking temporary anchor at the Safety Show Sydney. The temporary anchor's design enables attachment either to a metal roof or tile roof where no permanent anchoring systems are available, providing a safe work place at all times.

SafetyLink's FrogLink™ is a revolutionary all-in-one multi-directional unit designed to attach to all metal profiles with a single row of attachment holes. Its low profile reflective design aims to maintain an aesthetically pleasing residential or commercial façade and its dynamic design reduces the load back onto the structure and person attached to the anchor from 25.76kN to 3.1kN.

FrogLink™ is tested and manufactured in accordance with the applicable Australia and New Zealand Standards AS/NZS 1891.4 and is rated as a two-person anchor. TileLink™ is the perfect anchor for tile and slate roofs. It combines energy absorbing capabilities with a design that is practically invisible when looking at the roof.

Fixing TileLink is a simple task of screwing five (12 gauge, 50mm) roofing screws through the TileLink's existing holes. Five alternate fixing rows enable the TileLink™ to be positioned to suit the pattern of the roof tile. The TileLink™ fits snugly, eliminating waterproofing issues.

SafetyLink is an Australian owned company manufacturing height safety anchor points, static line systems, permanent ladders and ladder stabilisers. All SafetyLink products are designed to absorb energy, therefore minimising injury to the person and damage to the structure.
